

FACTORYMIND

ENTERPRISE RISK & OPPORTUNITY INTELLIGENCE

CocoaRisk Demo

One company. Thousands of signals. One decision.

Edoardo Masciandaro · Paulina Rodriguez · Edoardo Chiari
Alessandro Guglielmi · Matteo Micarelli

LUISS Business School · Accenture Challenge 2026

THE HIDDEN PROBLEM

Managers don't lack data.

They lack understanding.

Procurement, production, logistics and commercial each see their own slice. The signals exist — scattered across systems that never talk to each other.

**The problem isn't missing data.
It's fragmented intelligence.**

Production report

Freight tracker

Demand forecast

The cost of waiting is measured in millions.

AI DRAM CRISIS

+50–55%

DRAM contract prices, driven by AI data-center demand

Companies that read the signal locked contracts early. The rest paid the surge.

COCOA CRISIS

\$12k/t → -70% → +50%

Within months — one procurement decision worth millions in exposure

The most volatile input a confectioner buys, driven by public signals.

CONCENTRATION RISK

≈13% of GDP

Samsung Group revenue relative to South Korea's economy

One disruption propagates through an entire economy. Scale multiplies the cost of disconnected decisions.

The problem is not uncertainty. The problem is failing to connect uncertainty to enterprise decisions.

Complexity has exceeded human cognition.

TODAY — MONTHLY S&OP PLANNING

Spreadsheets & email threads

Four versions of the truth

Manual reconciliation in the meeting

Decisions argued, not quantified

4–7 days to one mid-cycle decision ~**130**
person-hours / cycle · no scenarios · no audit trail

FACTORYMIND

One unified intelligence layer

One quantified exposure — in euros

One governed Decision Packet, fully explained

One manager who approves

Every signal converges into a **single governed Decision Packet.**

THE PLATFORM

FactoryMind becomes the company's **second brain**.

FACTORYMIND — THE INTELLIGENCE LAYER

THE COMPANY

HOW FACTORYMIND ACTUALLY WORKS

The agentic workflow — auditable at every step.

HUMAN APPROVAL

The agent never escalates on its own. The Orchestrator reads the updated graph, decides materiality, and only it builds a **Decision Packet** — which no action executes without a **manager's sign-off**.

- ✓ Governed
- ✓ Auditable
- ✓ Explainable
- ✓ Manager in control

Agents publish evidence. The Orchestrator decides.

A four-level escalation framework — most signals **never reach a human.**

THE SIGNAL PIPELINE

	LEVEL 0	Graph Update	TRIGGER Any validated signal arrives	RESPONSE Knowledge Graph updated. No alert, no recommendation.
	LEVEL 1	Watch	TRIGGER EVaR rising, below policy threshold	RESPONSE Watchlist updated. Domain notified. No escalation.
	LEVEL 2	Scenario Trigger	TRIGGER Threshold breach (EVaR +15%, cover <30d, concentration >45%)	RESPONSE Scenario Engine fires. 10,000 Monte Carlo paths. Orchestrator ranks portfolios.
	LEVEL 3	Decision Packet	TRIGGER Materially superior action found (EVaR ↓ ≥20%)	RESPONSE Decision Packet built, Audit-verified, escalated to named approver.

Agents publish evidence. The Orchestrator decides materiality. Humans approve action.

≈1,000 signals → 100 graph updates → 20 watches → 5 scenarios → 1 Decision Packet

From a drought in West Africa to an approved decision.

Hours, not weeks — the entire chain runs inside one continuous intelligence loop.

Four actions. €1.6M of risk removed.

Seven screens, one continuous story — from **data trust** to **validated value**.

01

Data Health Center

Inputs are trustworthy
before any intelligence runs

02

Knowledge Graph / Risk Map

Live causal model — how risk
propagates in euros

03

Control Center / Agent Feed

Continuous monitoring; only
material events surface

04

Scenario Room

Stress-test futures; convert
a portfolio into a packet

05

Decision Center

Named human approves;
every decision logged

06

Value Center

ROI chain measured in the
C-suite's own currency

07

Reports

Immutable record of every signal,
packet and outcome

DECISION CENTER — THREE PACKET ORIGINS, ONE GOVERNANCE

MONITORING

Orchestrator-generated · material Level-2 alert

SCENARIO

User-created from the Scenario Room

PLANNING

From the S&OP / IBP planning cycle

All figures are produced by deterministic engines on a realistic synthetic environment.

WHY FACTORYMIND IS DIFFERENT

Most enterprise software informs. FactoryMind helps you decide.

ERP

Records transactions.

BI

Explains history.

Planning tools

Optimize execution.

**Commodity
platforms**

Monitor markets.

FACTORYMIND

Connects all signals

Quantifies exposure in euros

Simulates futures — 10,000 paths

Governs specialist AI agents

Generates governed Decision Packets

Learns from every outcome

THE INFORMATION BUSINESS

THE DECISION BUSINESS

Governed by design — people in control, accountable AI.

IMPACT ON ROLES & SKILL SETS

Procurement Manager

From data-gathering to validating risk-adjusted positions.

Operations Director

Final approver on high-impact packets; tuned to meet EVaR & confidence.

Head of Data (new)

New Model-Owner role: most broker, RAG upkeep, drift monitoring.

Financial Controller

From retrospective cost review to prospective exposure management.

RESPONSIBLE AI

Bias & fairness: Supplier scoring on objective operational metrics only — no geographic proxies.

Explainability: Every output carries a plain-language rationale and a confidence breakdown.

GDPR (privacy): No personal data processed — operational and market data only; by design.

Robustness: Drift monitoring; low-confidence agents enter pre-alert; safe fallback on failure.

GOVERNANCE & HUMAN-IN-THE-LOOP

Human approval: No action executes without named-tier sign-off; conflicts trigger dual approval.

COSO ERM frame: Each COSO component mapped to a concrete platform artifact, not a label.

Audit trail: Immutable log of signal, simulation, rationale, approver and timestamp.

Agentic governance: Closed agent registry; versioned prompts; every contract change is logged.

AI validates and explains. Deterministic engines calculate. Humans approve.

Governance is a design constraint that shapes the architecture — not a compliance appendix.

From pilot to enterprise intelligence in 16 weeks.

MONTHS 5-8 — EXPANSION: more plants · new industries · sustainability · supplier network · financial markets —
FactoryMind becomes enterprise-wide.

DECISIONS SHAPE OUTCOMES.
WE MAKE THEM COUNT.

FactoryMind

ONE SOURCE OF TRUTH.
SYSTEM-WIDE. RISK-AWARE. IMPACTFUL.
