

Automated Marketing Venture Plan

AN AI-POWERED EARLY-STAGE DESIGN
COMMUNICATION PLATFORM FOR
ARCHITECTS AND SMALL STUDIOS

Forma AI helps architects turn sketches, plans,
and site photos into client-ready design
directions — so clients understand faster,
revisions happen earlier, and design teams save time.

DESIGN FASTER
PRESENT CLEARER

ALIGN EARLIER

Startup definition

A design-communication platform for architects — not a generic image generator.

1. What it does

Uploads sketches, plans, site photos, or simple 3D models and returns client-ready design directions.

2. Core outputs

-  Visual directions
-  Moodboard
-  Material palette
-  Proposal pack

3. Target customer

Architects, small studios, and design teams that lose time to early-stage client misalignment.

Value proposition

Turn early design intent into clear client communication — before detailed modeling begins.

FROM SKETCH TO DESIGN DIRECTION

Upload

Generate directions

Compare

Assemble proposal pack

Made for architects
Built around the way you design and present.

Save early-stage time
Generate directions in minutes, not days.

Better client alignment
Help clients see, compare, and give feedback earlier.

More than images
Complete proposal packs ready to communicate.

The problem worth solving

Client misalignment happens too late — and becomes expensive.

Clients can't read
2D drawings

Plans and elevations mean little
to non-architects, so decisions
are made on imagination.

Early visualization
is slow and costly

Polished renders take hours or
days, and outsourcing adds
delay and cost.

Late revisions
erode margins

Misunderstandings discovered
after modeling create
unbilled rework.

FORMA AI'S ANSWER

Forma AI turns sketches, plans, and site photos
into client-ready design directions in minutes —
so clients react earlier and teams revise faster.

Upload

Directions

Client feedback

Better alignment

Target customers & segments

The strongest opportunities sit where early design communication is frequent, visual, and still largely manual.

Small architecture studios (3–8 staff)

Beachhead

Shared workflow, frequent client presentations, clear willingness to pay.

Solo / freelance architects

Primary awareness

High need for polished visuals, but limited time and resources.

Interior design studios

Expansion

Strong need for fast moodboards, materials, and lighting directions.

Renovation-focused studios

Secondary expansion

Need before-and-after visuals and client alignment before detailed design.

Strategic focus: Enter through small architecture studios, then expand into solo architects, interiors, and renovation workflows.

FORMA AI

INTELLIGENT TOOLS.
ARCHITECTURAL IMPACT.

Customer journey

From first awareness to long-term client alignment.

Marketing processes & AI role

What can be automated, what AI should support, and what remains human-led.

01

Market analysis

Fully automatable

No personal data, no consequential decision about a person.

02

Marketing strategy

Human-led + AI support

Positioning and priority calls carry strategic weight.

03

Planning & campaign design

AI-supported

AI drafts ideas and structure; humans approve before launch.

04

Marketing execution

AI-supported / automatable

Workflows run campaigns, but published brand output needs human sign-off.

05

Performance monitoring

Fully automatable

KPI, CAC, and ROI tracking can run continuously.

06

Continuous optimization

AI-supported

AI recommends changes; humans approve material shifts.

Rule of thumb: the legal and strategic weight of the output determines the level of human control.

The strategic questions

Three decisions deserve continuous AI-supported marketing intelligence.

Acquire better customers

KEY QUESTION

Which channels produce the highest-LTV customers?

DECISION

Where should acquisition budget go?

WORKFLOW — ICP & CHANNEL ATTRIBUTION

Understand customer needs

KEY QUESTION

What do architects actually need, request, and object to?

DECISION

What should we build and how should we communicate?

WORKFLOW — VOICE-OF-ARCHITECT INSIGHT MINER

Retain valuable customers

KEY QUESTION

Which behaviours predict churn before cancellation happens?

DECISION

Who should Customer Success contact first?

WORKFLOW — CHURN-RISK & ENGAGEMENT SIGNAL DETECTOR

Together, the three workflows connect acquisition, customer understanding, and retention in one intelligence loop.

Fragmented data, integrated intelligence

Descriptive dashboards show what happened. Forma AI needs AI workflows that explain what to do next.

Workflow 1 – ICP & Channel Attribution Engine

A system for deciding where acquisition budget should really go.

Marketing investment should be based on customer lifetime value, not low-cost sign-ups.

Workflow 2 – Voice-of-Architect Insight Miner

A system for turning qualitative feedback into product and messaging decisions.

Workflow 3 – Churn-Risk & Engagement Signal Detector

A system for proactive retention based on real product behavior.

Go-to-market starting point

Enter the market where the pain is urgent,
the workflow is shared, and the product fit is strongest.

BEACHHEAD SEGMENT

Small architecture studios (3–8 staff)

58 / 70

ATTRACTIVENESS SCORE

High urgency of the problem

Strong WTP

Acceptable willingness to pay
(€300–500 / month)

Good expansion potential toward
interior design studios and larger firms

Strategic principle: expand only when
output fidelity and trust have been validated.

1

Months 1–6 — Small studios

Focus on fast onboarding and
pre-sales usability within 30 minutes.

2

Months 6–12 — Interior design studios

Focus on material, lighting,
and atmosphere variations.

3

Months 12–18 — Real estate developers

Focus on stakeholder-ready visual
packages for approvals and pre-sales.

4

After 18 months — Mid-sized studios

Enter once BIM / Revit
integration is available.

“

Key message:

“Show the atmosphere before you lock the form.”

Made for architects

Save early-stage time

Better client alignment

More than images

FORMA AI

Positioning & core adoption insight

THE MAIN BARRIER IS TRUST IN THE VISUAL OUTPUT —
NOT PRICE OR COMPLEXITY.

1.

WHAT ARCHITECTS FEAR

Generic, Pinterest-like
visuals that flatten
architectural intent.

2.

WHAT THE OUTPUT MUST PRESERVE

- ✓ Architectural specificity
- ✓ Italian material and historical context
- ✓ Structural coherence
- ✓ Studio design identity

3.

RECOMMENDED POSITIONING

Architectural-fidelity
visualization —
not generic
AI rendering.

Forma AI is not an AI image generator.
It helps architects communicate
ideas faster and revise less.

Trust grows when visuals feel
specific, coherent, and true to
the studio's design language.

FORMA AI

Brand visibility across channels

HOW FORMA AI SHOULD APPEAR IN SEARCH, SOCIAL, REVIEW, AND AI-ANSWER ENVIRONMENTS.

Google (SEO + SEM)

Own search demand around fast architectural visualization and client presentation.

ChatGPT / Perplexity / Gemini

Become the cited expert source on early-stage architectural visualization.

Instagram & Pinterest

Show sketch-to-render and before/after transformations as reference content.

LinkedIn

Publish practitioner case studies and time-saved evidence for decision-makers.

Review platforms

Build credibility for comparison queries through reviews.

ArchDaily / Houzz

Strengthen authority with design-led education and inbound discovery.

GEO THESIS

Italian-language expert content on early-stage architectural visualization is still sparse — this is a first-mover opportunity to become the default cited source.

Workflow 4 – GEO Citation Auditor

Automated monitoring of AI-search visibility, citations, and positioning consistency.

?

CORE QUESTION:

Is Forma AI visible and correctly described as a design-communication platform?

1 Inputs

Search queries, agreed positioning, required claims, prohibited claims, competitors.

2 AI / search process

Manual + weekly trigger; query Gemini, Perplexity, and OpenAI, normalize, evaluate, and score.

3 Outputs

GEO Visibility Score, Positioning Accuracy Score, citation in Google Sheets, competitor displacement, weekly report.

4 Managerial decision

Which claims to reinforce, where discoverability is weak, and what drift to correct.

Automation makes discoverability measurable while human teams decide how the brand should respond.

Critical cases include lost citations, sharp score declines, prohibited claims, or serious positioning drift.

Automating Creative Production & Pricing Strategy

Lesson 4 — From Marketing Strategy to Working AI Systems

Earlier sections showed how Forma AI understands its market and defines its strategy. This section shows where that strategy becomes real: two AI workflows that operate every day — one turns real project results into consistent brand content, the other turns market and customer signals into pricing decisions.

Two systems, one shared pattern: AI drafts continuously, a human decides once, then it becomes real.

01 Content Creation Automation

Turns real project transformations into on-brand social content drafts.

02 Pricing Intelligence

Turns competitor and customer signals into tier-level pricing recommendations.

Two decision-support systems — one for what gets published, one for what gets charged.

Made for architects

Built around the way you design and present.

Save early-stage time

Generate directions in minutes, not days.

Better client alignment

Help clients see, compare, and give feedback earlier.

More than images

Complete proposal packs ready to communicate.

The Governing Principle

The same approval rule shapes both workflows before anything becomes public or priced.

AI Can Draft It When

- ✓ No personal data is involved
- ✓ No consequential decision is being made
- ✓ Nothing is being published under the brand yet

A Human Must Approve When

- ✓ The output reaches a real customer
- ✓ It sets a price
- ✓ It represents the public brand voice

Both workflows enforce this structurally, not just as policy. The content workflow has no node that can generate a fake image to replace a real project. The pricing workflow's data has no field that can hold a price tied to one customer — only tier prices exist.

Two working systems, one shared logic: AI drafts, humans approve, the brand stays protected.

Made for architects

Built around the way you design and present.

Save early-stage time

Generate directions in minutes, not days.

Better client alignment

Help clients see, compare, and give feedback earlier.

More than images

Complete proposal packs ready to communicate.

Workflow 5 – Content Creation Automation

Turn real completed projects into approved multi-channel content.

01 Draft

A real, already-completed project transformation is pulled automatically and turned into platform-ready captions through a short AI process.

02 Human Approval

Nothing publishes until a person reviews and approves the draft.

03 Publish

Once approved, it goes live on Instagram, Pinterest, and LinkedIn in parallel — the channels that match how buyers discover and evaluate the work.

The system protects the brand's most persuasive asset — the real before/after reveal — by design.

No step ever generates a substitute image — every post is a real before/after transformation.

Made for architects

Built around the way you design and present.

Save early-stage time

Generate directions in minutes, not days.

Better client alignment

Help clients see, compare, and give feedback earlier.

More than images

Complete proposal packs ready to communicate.

Workflow 6 – Pricing Intelligence

Tier-level pricing recommendations powered by market and customer signals.

01 Monitor

Competitor and freelance-render pricing is tracked automatically every week.

02 Listen

Real customer feedback is mined monthly for willingness-to-pay signals, by segment only, never by individual.

03 Recommend

An AI agent proposes a price for one of three tiers — Solo, Studio, and Scale — with a written rationale.

Human Approval & Publish

A person reviews and approves before any price goes live; the published price is the same for every customer in that tier.

Solo

Ideal for individual architects.

Studio

Built for small to mid-size studios.

Scale

For growing and enterprise teams.

Final positioning and legal compliance (no individualized automated pricing, GDPR Art. 22) stay human decisions the AI never makes.

The workflow answers 'what should we charge and why' with real data, while keeping legally and strategically consequential decisions human.

Made for architects

Built around the way you design and present.

Save early-stage time

Generate directions in minutes, not days.

Better client alignment

Help clients see, compare, and give feedback earlier.

More than images

Complete proposal packs ready to communicate.

One system. Four workflow layers.

A synthesis view of how the four lessons connect into one AI-enabled operating system.

Together, the four lessons form **one continuous system**:
from input and research, to positioning and creation, to optimization and iterative improvement.
